**During your career at AMS Management Systems, you will:**

**Develop strategies for strengthening clients' information technology capabilities.**

**Design technical architectures for both system and application functions.**

**Analyze clients' functions to redesign business processes to achieve breakthrough improvements in performance.**

**Design and develop applications using state-of-the-art and traditional tools and techniques.**

**Evaluate alternative solutions to identify the best way to maximize benefits given cost, schedule and risk constraints.**

**Provide systems integration across multiple platforms using client/server and mainframe solutions.**

AMS Management Systems looks for graduates from a variety of school disciplines: computer science, business and industrial management, engineering and informatics. We want graduates who are intelligent, creative problem solvers. People committed to providing value to our clients. At AMS Management Systems, we put a premium on initiative and enthusiasm for mastering new technologies and putting them to use mainstream business tools.

**AMS Management Systems**

Our competitive strength and history of successful performance - 24 years of consecutive growth and projected revenues to exceed \$ 400 million for 1994 - are due to:

The expertise of our employees, their continual professional development, and their commitment to provide value to our clients.

The full range of information technology services from strategic systems planning to large-scale systems design, development and implementation.

Our commitment to the use of our proven systems development methodology and leading edge technologies.

Our industry-specific, reusable applications software, customized to meet a client's unique requirements.

**Our clients:**

In Europe, we focus on the leading organizations at the forefront of the target telecommunications and financial institutions industries. We provide the most prestigious consumer and corporate banks with the business framework on which technical solutions are built in the areas of managing customer relationships, processing securities transactions, managing risk, and financing trade. Our telecommunications clients, both cellular and wire-based, are the largest and most important in the world. We provide them with solutions to their

**AMS Management Systems**, helps clients improve their performance through the intelligent use of information technology. We combine specific industry experience, business function expertise, proven systems development practices, and an extraordinary depth of technical competence to help our clients meet their business goals.

problems in the areas of customer management and care, customer billing, and business processes.

### Our Projects:

Projects are led by experienced managers and team leaders.

Team members have full responsibility for the quality of their "deliverable-oriented" tasks.

Some projects are 6 months in length with teams of 3-5 people. Larger projects can span 1 to 2 years and be staffed by multiple teams totalling 50 to 100 people.

### Our Training:

Training needs are assessed individually based in prior experience and education.

Courses are offered to develop technical, managerial, functional and interpersonal skills.

Staff attend in-house and external training sessions to prepare for upcoming assignments, keep pace with evolving technologies, and share best practices.

### Our Locations

AMS Management Systems employs over 4,000 people serving clients from 35 cities throughout North America and Europe including.

Boston, MA	London, UK
Brussels, Belgium	Los Angeles, CA
Chicago, IL	Mexico City, Mexico
Denver, CO	Montreal, Canada
Düsseldorf, Germany	Munich, Germany
Frankfurt, Germany	New York, NY
The Hague, Netherlands	Ottawa, Canada
Houston, TX	San Francisco, CA
Lisbon, Portugal	Stockholm, Sweden

## **AMS Management Systems**

### Skills for Success

Our success depends on project teams of talented individuals who have skills across many disciplines. Expertise in current technologies and systems engineering is critically important to us. We also place high value on analytical, management and leadership skills as well as knowledge of the key industries in which we work. Of course, strong interpersonal and consulting skills are indispensable in leading the way to constructive change in large organizations and building long-term relationships.

**Consultant  
Opportunities at AMS**

With a wide range of talents, we can provide a wide range of information services to our clients. We don't expect each person to have all of these skills, nor do we have highly structured job descriptions or narrowly defined roles. Individuals who succeed at AMS contribute to multiple phases of the system life-cycle; they are innovative in identifying strategies, plans and solutions and they like to implement ideas.

### Our Requirements

We require a commitment to excellence in our services and products. In new hires we seek intellectual curiosity, innovative problem-solving skills, strong academic performance, entrepreneurial spirit, and a long-term interest in the application of information technologies.

### Typical Activities

Combinations of these activities are opportunities for you to shape your own unique position as you contribute to AMS Management Systems' business and achieve personal and professional growth.

- Develop strategies for strengthening clients' information technology capabilities.
- Analyze clients' functions to redesign business processes to achieve breakthrough improvements in performance.
- Evaluate alternative solutions to identify the best way to maximize benefits given cost, schedule and risk constraints.
- Design technical architectures for both system and application functions.
- Design and develop applications using state-of-the-art tools and techniques.
- Provide systems integration across multiple platforms using client/server solutions.
- Apply technologies such as GUI, imaging, multimedia and mobile computing.
- Apply object-oriented design techniques to build foundation software and common infrastructures for complex business applications.
